

WHICH PROGRAMME FILE DO I USE?

Firstly, you need to determine which type of KM3000 or KM4000 radio you have. Look at the label on the side of the radio. This will tell you whether you have a KM3000 or KM4000 radio. There is only one type of KM4000 but there are two types of KM3000.

To find out which type you have to take off the top cover and see what colour of pcb is inside. It will either be green or yellow.

There are three programme files contained in this .zip file:-

KM3000 2025 V7 (GRN).3CP – use for the green KM3000

KM3000 2025 V7 (YEL).3CP – use for the yellow KM3000

KM4000 2025 V7.4CP – use for the KM4000

Load the appropriate file into the programming software and programme it into the radio.

You will now have the latest set of channels.
